**DETAILED ACTION**  
**EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jason Graff (480) 385-5060 on June 29, 2009.

Following claims are amended;

9. (Currently Amended) A method of maintaining quality of service in a computer network, comprising: transmitting a first packet of data from a first node to a second node ~~via~~ by a network path in accordance with a first call admission policy based on a first severity level for the network path; receiving the first packet of data at the second node;

determining, by the second node, a second severity level for the network path based on a condition of the network path; transmitting, by the second node, data associated with the second severity level to the first node; receiving the data associated with the second severity level at the first node;

comparing, by the first node, the first severity level and the second severity level; replacing the first call admission policy with a second call admission policy, by the first node if based on the first severity level and the second severity level are being different severity levels; and applying, by the first node, the second call admission policy to

regulate the transmission of packets of data from the first node to the second node based on a type of data included within the packets of data.

17. (Currently Amended) A computer-readable medium encoded with ~~a computer program, the computer program, when executed by a processor, cause the processor~~ processor readable codes, executed by the processor to perform steps to: receive data associated with a current severity level in accordance with a first call admission policy, the current severity level being determined at a second node based on a packet of data transmitted from a first node to the second node; compare the current severity level with a previous severity level for regulating the transmission of packets of data from the first node to the second node; replace the first call admission policy with a second call admission policy ~~if based on~~ the previous severity level and the current severity level are being different severity levels; and apply the second call admission policy to regulate the transmission of packets of data from the first node to the second node based on a type of data included within the packets of data.

18. (Currently Amended) The computer-readable medium of claim 17, wherein the ~~computer program~~ processor readable codes further ~~causing~~ comprising the processor to perform steps to: calculate a cost function based on a packet of data received from a remote node; replace one of the current severity level and the previous severity level with an updated severity level; and transmit the updated severity level to the remote node.

19. (Currently Amended) The computer-readable medium of claim 17, wherein the ~~computer program causing~~ processor readable codes further comprising the

processor to apply the second call admission policy ~~comprises further causes the processor to~~ admit a first class of calls when the current severity level is less than the previous severity level and to block a second class of calls when the current severity level is greater than or equal to the previous severity level.

20. (Currently Amended) The computer-readable medium of claim 17, wherein the ~~computer program causing the processor~~ processor readable codes further comprising to apply the second call admission policy ~~further causes the processor to~~ admit calls greater than a predetermined size associated with a predetermined class when the current severity level is less than the previous severity level and to block calls that will consume less than or equal to a predetermined bandwidth associated with the predetermined class when the current severity level is greater than the previous severity level.

21. (Currently Amended) A method of maintaining quality of service in a computer network where no quality of service information is received from the computer network, comprising: transmitting a packet of data from a first node to a second node ~~via~~ by a network path in accordance with a first call admission policy based on a first severity level of the network path; receiving the packet of data at the second node; determining, by the second node, a second severity level based on a condition of the network path; transmitting, by the second node, data associated with the second severity level to the first node; receiving the data associated with the second severity level at the first node; comparing, by the first node, the first severity level and the second severity level; replacing the first call admission policy with a second call

admission policy, by the first node, if based on the first severity level and the second severity level are being different severity levels; and applying, by the first node, the second call admission policy to regulate the transmission of packets of data from the first node to the second node based on a type of data included within the packets of data and without using QoS data from the computer network.

The following is an examiner's statement of reasons for allowance:

Claim 1, is allowed.

The prior art fails to disclose receive a packet of data from the first processor, the packet of data including a condition of the first network path, calculate a different severity level for the first network path based on the condition of the network path, and transmit the different severity level to the first processor, wherein the first processor is further configured to replace the one of the plurality of admission policies with a different one of the plurality of admission policies based on the different severity level.

Claims 9, 17 and 21 are allowed.

The prior art fails to disclose receiving the data associated with the second severity level at the first node; comparing, by the first node, the first severity level and the second severity level; replacing the first call admission policy with a second call admission policy, by the first node based on the first severity level and the second severity level are different severity levels; and applying, by the first node, the second call admission policy to regulate the transmission of packets of data from the first node to the second node based on a type of data included within the packets of data.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
